

ChromViz 1.0

a java tool to visualize high throughput (gene expression) data on Chromosomes

Ashok R. Dinasarapu, Srujana Dinasarapu and Shankar Subramaniam
University of California San Diego, USA

Step 1. The user can upload his/her own data and visualize after pathway selection OR the user can select pathway and can visualize pathway genes on chromosomes along with UCSC genome browser data such as gene co-ordinates etc..

Step 2. Input file Selection: Expression data selection window. Number of Ligands (Ex: 2 for KLA, ATP data). Then user has to select corresponding data column from the input file.

ChromViz 1.0 - Visualization of High-throughput Data on Chromosomes

☒ Microarray Data

GENOMIC Sequence	Pathway Network
PROTEIN Sequence	XML
Protein List	Export Image

☐ Select Pathway

☐ Refresh All

ChromViz 1.0

Select Identifier type and column number!

Use can edit!

Select Data Frame

Gene Identifier	Column	Ligand
Entez ID	1	3
1hr	2	ATP
2hr	5	KLA
4hr	4	KA
24hr	3	

Add Upload Delete

Human Chromosomes

ChromViz 1.0 - a visualization tool for the high-throughput data on Chromosomes

Step 3. **Pathway Selection:** Once data uploaded, the user has to select pathway from drop-down list of pathways.

☒ Microarray Data ☐ Select Pathway ☐ Refresh All

Select Data File

GENOMIC Sequence	Pathway Network
PROTEIN Sequence	XML
Protein List	Export Image

ChromViz 1.0

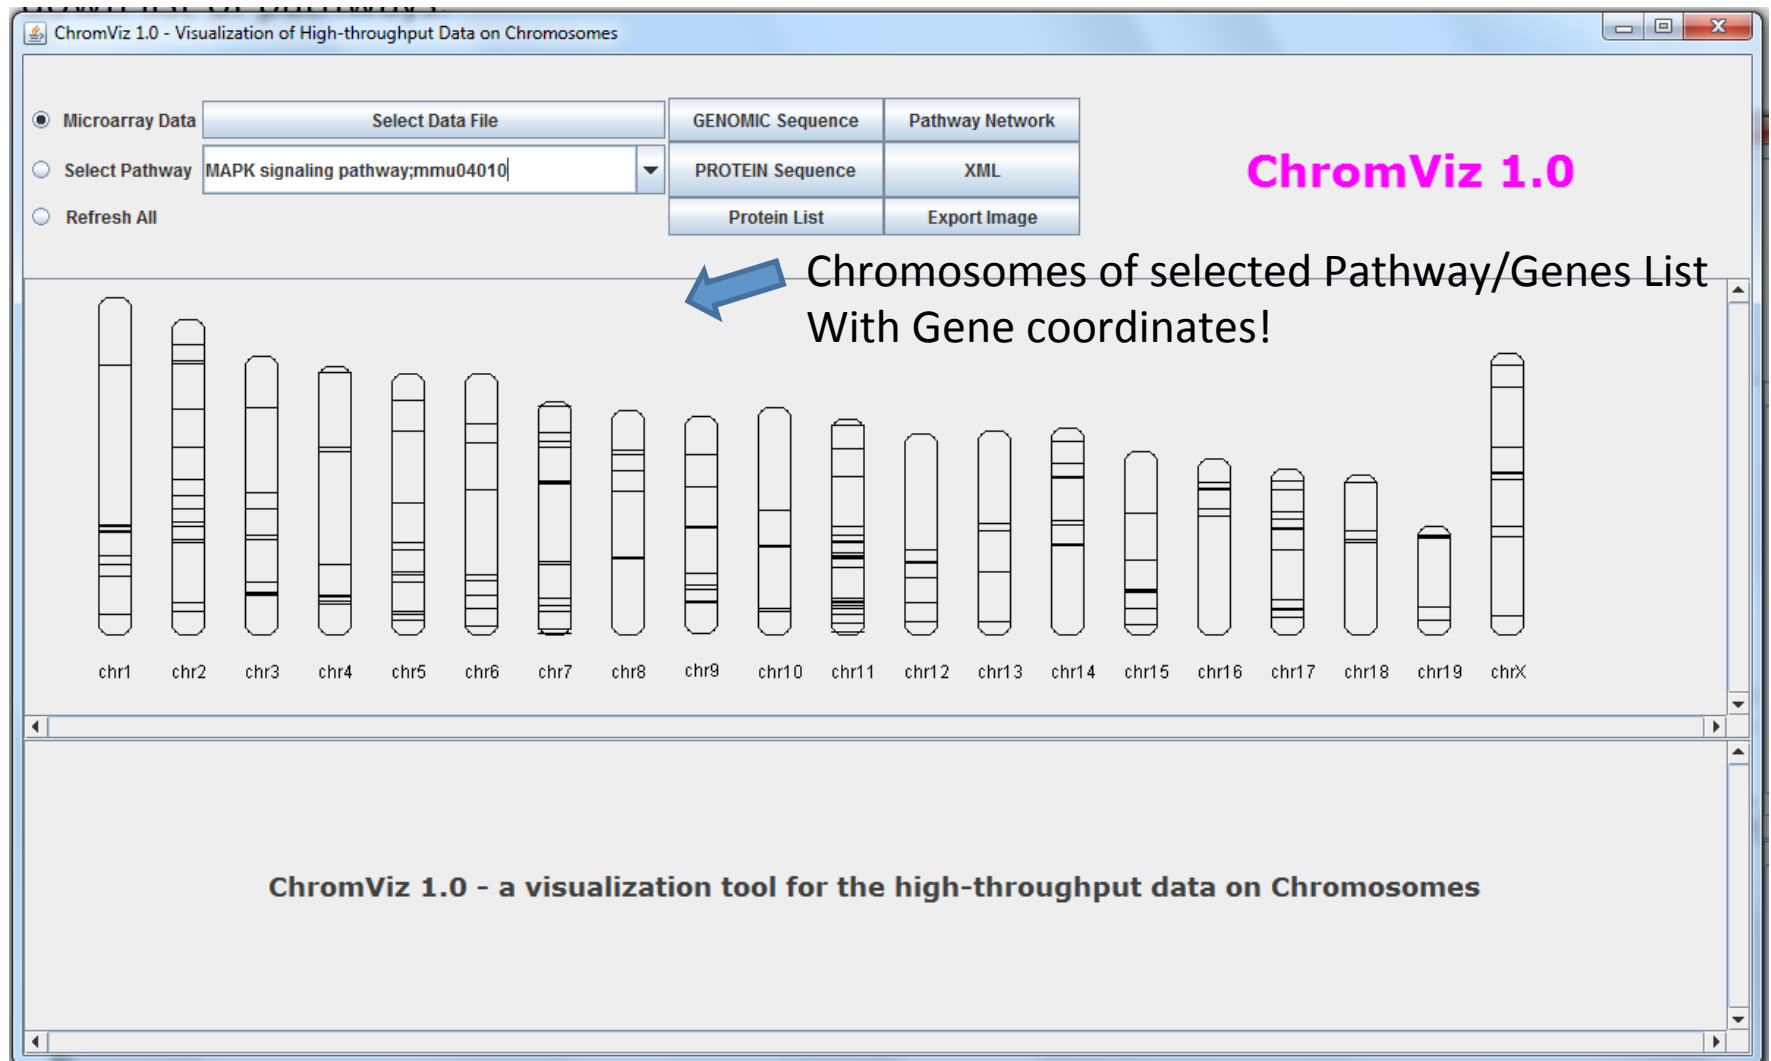

Select Pathway/Genes List!

- TGF-beta signaling pathway;mmu04350
- Dilated cardiomyopathy;mmu05414
- MAPK signaling pathway;mmu04010
- Hematopoietic cell lineage;mmu04640
- Natural killer cell mediated cytotoxicity;mmu04650
- B cell receptor signaling pathway;mmu04662
- ErbB signaling pathway;mmu04012
- T cell receptor signaling pathway;mmu04660
- Viral myocarditis;mmu05416
- Calcium signaling pathway;mmu04020

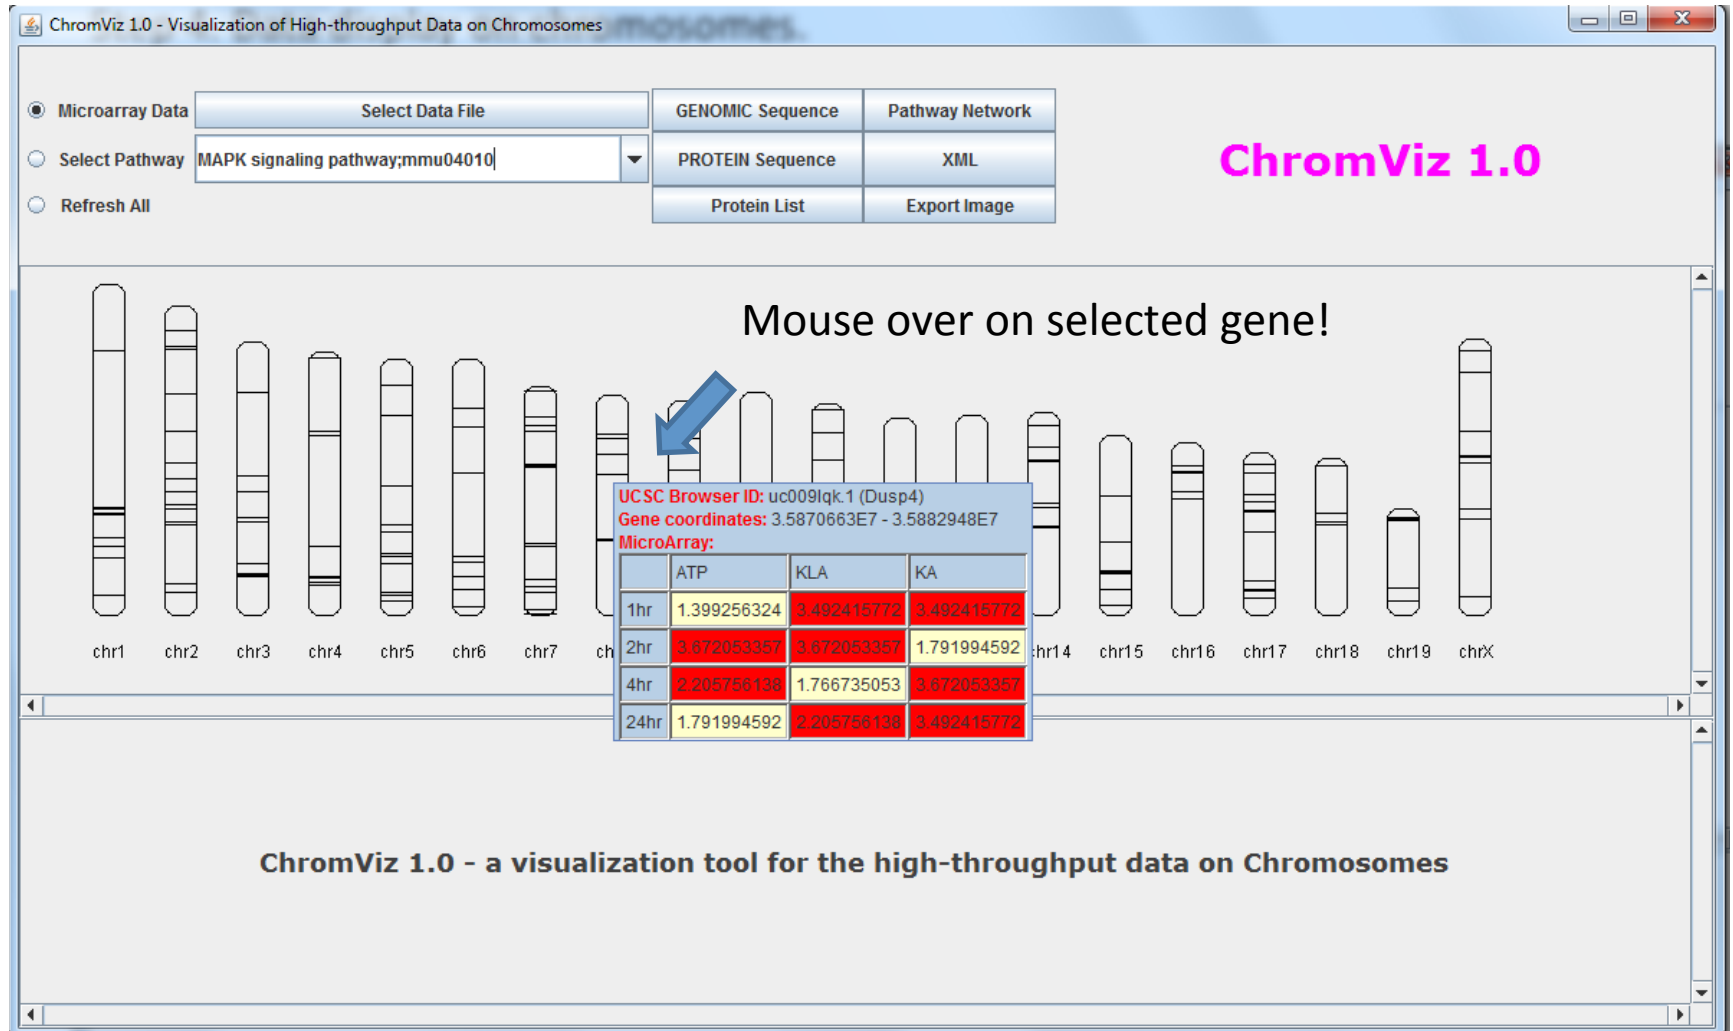

Human Chromosomes

ChromViz 1.0 - a visualization tool for the high-throughput data on Chromosomes

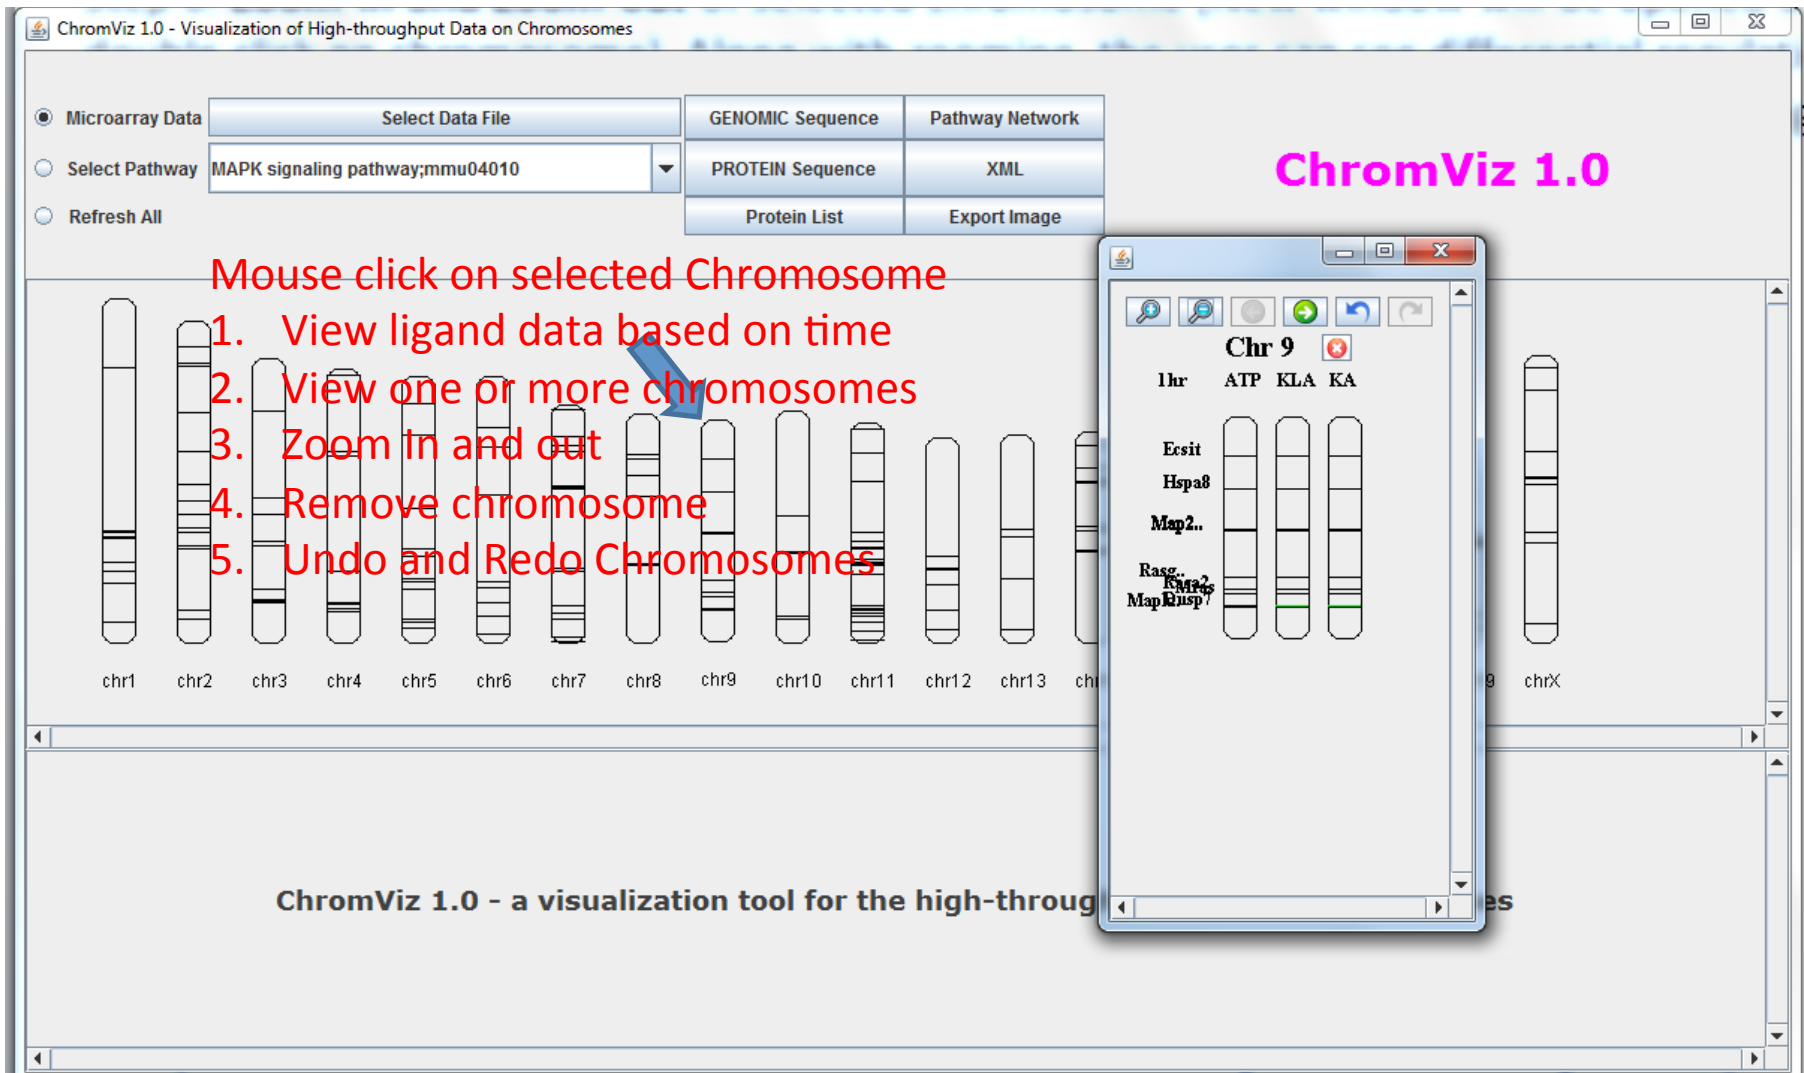

Step 4. Data display on chromosomes.

Step 5. **Heat Map** of selected gene on Chromosome. Mouse over on gene mark (red) on chromosome.

Step 6. **Zoom-in and Zoom-out** of selected chromosome (New window will be opened after double click on chromosome). Along with zooming, the user can see differential regulation of genes (more than one treatment also) on chromosomes at each time point by clicking right OR left buttons.

Step 7. **Visualize data on zoomed chromosome.** Link (mouse right click) is also provided to open UCSC genome Browser page of selected gene.

The screenshot displays the ChromViz 1.0 web application. The main interface includes a control panel on the left with radio buttons for 'Microarray Data', 'Select Pathway' (set to 'MAPK signaling pathway;mmu04010'), and 'Refresh All'. To the right of these are buttons for 'GENOMIC Sequence', 'PROTEIN Sequence', 'Pathway Network', 'XML', 'Protein List', and 'Export Image'. The central area shows a set of eight chromosome bars labeled chr1 through chr8. A zoomed-in window is overlaid on the right, showing a detailed view of four chromosomes: Chr 9, Chr 11, Chr 7, and Chr 4. Each chromosome in the zoomed view is represented by three vertical bars labeled 'ATP', 'KLA', and 'KA'. Various gene names are listed next to these bars, such as 'Ecsit', 'Hspa8', 'Map2...', 'Rasg...', 'Map...', 'Pla2...', 'Ppp...', 'Fgf18', 'AK07...', 'Arrb1', 'Palc...', 'Fgfr3', 'Perc8', 'Mos', 'Fgf9...', 'Mknk1', and 'Pazp1'. A blue arrow points from the text 'Select one or more Chromosomes for ZoomIn and ZoomOut' to the zoomed-in window.
